

TABLE A-1
IDF REGION 2 DESIGN STORM RAINFALL

**TABLE A-2
RUNOFF CURVE NUMBERS
(FROM NRCS (SCS) TR-55)**

| Cover Description Land/Use Cover Type | Average Imperviousness (percent) | Curve Numbers For Hydrologic Soil Group | | | |
|--|--|--|----|----|----|
| | | A | B | C | D |
| Open space (lawns, parks, golf courses, cemeteries, etc.): | n/a ^a | 39 | 61 | 74 | 80 |
| Good condition (grass cover greater than 75%) | | | | | |
| Impervious areas: | n/a | 98 | 98 | 98 | 98 |
| Paved parking lots, roofs, driveways, etc. (excluding right-of-way) | | | | | |
| Streets and roads: | n/a | 98 | 98 | 98 | 98 |
| Paved; curbs and storm sewers (excluding right-of-way) | | | | | |
| Paved; open ditches (including right-of-way) | n/a | 98 | 98 | 98 | 98 |
| Gravel (including right-of-way) | | 76 | 85 | 89 | 91 |
| Urban Districts: | | | | | |
| Commercial and business | 85 | 89 | 92 | 94 | 95 |
| Industrial | 72 | 81 | 88 | 91 | 93 |
| Residential Districts by average lot size: | | | | | |
| 1/8 acre or less (town houses) | 65 | 77 | 85 | 90 | 92 |
| 1/4 acre | 38 | 61 | 75 | 83 | 87 |
| 1/3 acre | 30 | 57 | 72 | 81 | 86 |
| 1/2 acre | 25 | 54 | 70 | 80 | 85 |
| 1 acre | 20 | 51 | 68 | 79 | 84 |
| 2 acres | 12 | 46 | 65 | 77 | 82 |
| Woods: | n/a | 30 | 55 | 71 | 77 |
| Brush: | | 35 | 56 | 70 | 77 |
| Meadow: (In good condition) | | 30 | 58 | 71 | 78 |

TABLE A-4
RATIONAL RUNOFF COEFFICIENTS
(RAWLS, WONG, MCCUEN)

TABLE A-5
MANNING ROUGHNESS COEFFICIENTS
FOR OPEN CHANNELS AND MANNING N VALUES FOR SHEET FLOW

| | Manning's n range | | Manning's n range |
|--|----------------------|--|----------------------|
| I. Closed conduits: | | III. Open channels, excavated (straight alignment, natural lining): | |
| A. Concrete pipe | 0.011-0.013 | A. Earth, uniform section: | |
| B. Corrugated-metal pipe or pipe arch: | | 1. Clean, recently completed | 0.016-0.018 |
| 1. 2 1/2 by 1/2 inch corrugation (riveted) pipe: | | 2. Clean, after weathering | 0.018-0.020 |
| a. Plain or fully coated | 0.024 | 3. With short grass, few weeds | 0.022-0.027 |
| b. Paved invert (range values are for 25 and 50 percent of circumference paved): | | 4. In gravelly soil, uniform section, clean | 0.022-0.025 |
| (1) Flow full depth | 0.021-0.018 | B. Earth, fairly uniform section: | |
| (2) Flow 0.8 depth | 0.021-0.016 | 1. No vegetation | 0.022-0.025 |
| (3) Flow 0.6 depth | 0.019-0.013 | 2. Grass, some weeds | 0.025-0.030 |
| 2. 6 by 2-inch corrugation (field bolted) | 0.030 | 3. Dense weeds or aquatic plants in deep channels | 0.030-0.035 |
| C. Cast-iron pipe, uncoated | 0.013 | 4. Sides clean, gravel bottom | 0.025-0.030 |
| D. Steel pipe | 0.009-0.011 | 5. Sides clean, cobble bottom | 0.030-0.040 |
| E. Monolithic concrete: | | C. Dragline excavated or dredged: | |
| 1. Wood forms, rough | 0.015-0.017 | 1. No vegetation | 0.028-0.033 |
| 2. Wood forms, smooth | 0.012-0.014 | 2. Light brush on banks | 0.035-0.050 |
| 3. Steel forms | 0.012-0.013 | D. Rock: | |
| F. Cemented rubble masonry walls: | | 1. Based on design section | 0.035 |
| 1. Concrete floor and top | 0.017-0.022 | 2. Based on actual mean section: | |
| 2. Natural floor | 0.019-0.025 | a. Smooth and uniform | 0.035-0.040 |
| | | b. Jagged and irregular | 0.040-0.045 |
| II. Open channels, lined (straight alignment): | | E. Channels not maintained, weeds and brush uncut: | |
| A. Concrete, with surfaces as indicated: | | 1. Dense weeds, high as flow depth | 0.080-0.120 |
| 1. Formed, no finish | 0.013-0.017 | 2. Clean bottom, brush on sides | 0.050-0.080 |
| 2. Trowel finish | 0.012-0.014 | 3. Clean bottom, brush on sides, highest stage of flow | 0.070-0.110 |
| 3. Float finish | 0.013-0.015 | 4. Dense brush, high stage | 0.100-0.140 |
| 4. Float finish, some gravel on bottom | 0.015-0.017 | | |
| 5. Gunite, good section | 0.016-0.019 | IV. Channels and swales w/maintained vegetation (values shown are for velocities of 2 & 6 f.p.s.): | |
| 6. Gunite, wavy section | 0.018-0.022 | A. Depth of flow up to 0.7 foot: | |
| B. Concrete, bottom float finished, sides as indicated: | | 1. Bermudagrass, Kentucky bluegrass, buffalograss | |
| 1. Dressed stone in mortar | 0.015-0.017 | a. Mowed to 2 inches | 0.045-0.070 |
| 2. Random stone in mortar | 0.017-0.020 | b. Length 4-6 inches | 0.050-0.090 |
| 3. Cement rubble masonry | 0.020-0.025 | 2. Good stand, any grass: | |
| 4. Cement rubble masonry, plastered | 0.016-0.020 | a. Length about 12 inches | 0.090-0.180 |
| 5. Dry rubble (riprap) | 0.020-0.030 | b. Length about 24 inches | 0.150-0.300 |
| C. Gravel bottom, sides as indicated: | | 3. Fair stand, any grass: | |
| 1. Formed concrete | 0.017-0.020 | a. Length about 12 inches | 0.080-0.140 |
| 2. Random stone in mortar | 0.020-0.023 | b. Length about 24 inches | 0.130-0.250 |
| 3. Dry rubble (riprap) | 0.023-0.033 | B. Depth of flow 0.7-1.5 feet: | |
| D. Asphalt | | 1. Bermudagrass, Kentucky bluegrass, buffalograss: | |
| 1. Smooth | 0.013 | a. Mowed to 2 inches | 0.035-0.050 |
| 2. Rough | 0.016 | b. Length 4 to 6 inches | 0.040-0.060 |
| E. Concrete-lined excavated rock: | | 2. Good stand, any grass: | |
| 1. Good section | 0.017-0.020 | a. Length about 12 inches | 0.070-0.120 |
| 2. Irregular section | 0.022-0.027 | b. Length about 24 inches | 0.100-0.200 |
| | | 3. Fair stand, any grass: | |
| | | a. Length about 12 inches | 0.060-0.100 |
| | | b. Length about 24 inches | 0.090-0.170 |

| | Manning's n range | | Manning's n range |
|---|----------------------|---|----------------------|
| V. Street and expressway gutters: | | | |
| A. Concrete gutter, troweled finish | 0.012 | a. Bottom of gravel, cobbles and few boulders | 0.040-0.050 |
| B. Asphalt pavement: | | b. Bottom of cobbles, with large boulders | 0.050-0.070 |
| 1. Smooth texture | 0.013 | | |
| 2. Rough texture | 0.016 | B. Floodplains (adjacent to natural streams): | |
| C. Concrete gutter with asphalt pavement | | 1. Pasture, no brush: | |
| 1. Smooth | 0.013 | a. Short grass | 0.030-0.035 |
| 2. Rough | 0.015 | b. High grass | 0.035-0.050 |
| D. Concrete pavement: | | 2. Cultivated areas: | |
| 1. Float finish | 0.014 | a. No crop | 0.030-0.040 |
| 2. Broom finish | 0.015 | b. Mature row crops | 0.035-0.045 |
| E. For gutters with small slope, where sediment may accumulate, increase above values of x by | 0.002 | c. Mature field crops | 0.040-0.050 |
| | | 3. Heavy weeds, scattered brush | 0.050-0.070 |
| | | 4. Light brush and trees: | |
| | | a. Winter | 0.050-0.060 |
| | | b. Summer | 0.060-0.080 |
| VI. Natural stream channels: | | 5. Medium to dense brush: | |
| A. Minor streams (surface width at flood stage less than 100 feet): | | a. Winter | 0.070-0.110 |
| 1. Fairly regular section: | | b. Summer | 0.100-0.160 |
| a. Some grass & weeds, little or no brush | 0.030-0.035 | 6. Dense willows, summer, not bent over by current | 0.150-0.200 |
| b. Dense growth of weeds, depth of flow materially greater than weed height | 0.035-0.050 | 7. Cleared land w/tree stumps, 100-150 per acre: | |
| c. Some weeds, light brush on banks | 0.035-0.050 | a. No sprouts | 0.040-0.050 |
| d. Some weeds, heavy brush on banks | 0.050-0.070 | b. With heavy growth of sprouts | 0.060-0.080 |
| e. Some weeds, dense willows on banks | 0.060-0.080 | 8. Heavy stand of timber, a few down trees, little undergrowth: | |
| f. For trees within channel with branches submerged at high stage, increase all above values by | 0.010-0.020 | a. Flood depth below branches | 0.100-0.120 |
| 2. Irregular sections, with pools, slight channel meander; increase given in 1 a-e about | 0.010-0.020 | b. Flood depth reaches branches | 0.120-0.160 |
| 3. Mountain streams, no vegetation in channel, banks usually steep, trees and brush along banks submerged at high stage | | C. Major streams (surface width at flood stage more than 100 feet): | |
| | | Roughness coefficient is usually less than for minor streams of less effective resistance offered by irregular banks or vegetation on banks. Values of n may be somewhat reduced. Follows recommendation in publication cited if possible. The value of n for larger streams of most regular section, with no boulders or brush, may be in the range of | 0.028-0.033 |

MANNING'S ROUGHNESS COEFFICIENTS FOR SHEET FLOW

| SURFACE DESCRIPTION | n ¹ | SURFACE DESCRIPTION | n ¹ |
|---|----------------|---------------------|----------------|
| Smooth surfaces (concrete, asphalt, gravel, or bare soil) | 0.011 | Grass: | |
| Fallow (no residue) | 0.05 | Short grass prairie | 0.15 |
| Cultivated soils: | | Dense grasses | 0.24 |
| Residue cover 20% | 0.06 | Bermudagrass | 0.41 |
| Residue cover 20% | 0.17 | Range (natural) | 0.13 |
| | | Woods: | |
| | | Light underbrush | 0.40 |
| | | Dense underbrush | 0.80 |

**TABLE A-6
MANNING ROUGHNESS COEFFICIENTS
FOR PIPES**

| Description | "n" |
|---|-------|
| Smooth-roll plastic pipe | 0.011 |
| Concrete pipe | 0.012 |
| Smooth-lined corrugated metal pipe | 0.012 |
| Corrugated plastic pipe | 0.024 |
| Annular corrugated steel and aluminum Alloy pipe (plain or polymer coated) | |
| 2 2/3" x 1/2" corrugations | 0.024 |
| 3" x 1" corrugations | 0.027 |
| 5" x 1" corrugations | 0.025 |
| 6" x 2" corrugations | 0.033 |
| Helically corrugated steel and aluminum Alloy pipe (plain or polymer coated) | 0.024 |
| 3" x 1", 5" x 1" or 6" x 2" corrugations | |
| Helically corrugated steel and aluminum Alloy pipe (plain or polymer coated) | |
| 2 2/3" x 1/2" corrugations | |
| a. Lower coefficients● | |
| 18" diameter | 0.014 |
| 24" diameter | 0.016 |
| 36" diameter | 0.019 |
| 48" diameter | 0.020 |
| 60" diameter or larger | 0.021 |
| b. Higher coefficients▲ | 0.024 |
| Annular or Helically corrugated steel or aluminum alloy pipe arches or other on- circular conduit (plain or polymer coated) | 0.024 |
| Vitrified clay pipe | 0.012 |
| Ductile iron pipe | 0.013 |

●Use the lower coefficient if any one of the following conditions apply:

- a. A storm pipe longer than 20 diameters, which directly or indirectly connects to an inlet or manhole, located in swales adjacent to shoulders in cut areas, shoulders in cut areas or depressed medians.
- b. A storm pipe which is specially designed to perform under pressure.

▲Use the higher coefficient if any one of the following conditions apply:

- a. A storm pipe which directly or indirectly connects to an inlet or manhole located in highway pavement sections or adjacent to curb or concrete median barrier.
- b. A storm pipe which is shorter than 20 diameters long.
- c. A storm pipe which is partly lined helically corrugated metal pipe.

In considering each factor more critical judgement is necessary if it is kept in mind that any condition that causes turbulence and retards flow results in a greater value of "n."

Outlet velocity for bituminous paved invert shall be determined based on a 25% reduction in Manning's roughness coefficient, "n."

Source: Pennsylvania Department of Transportation Design Manual, Part 2, January 1990.

**TABLE A-7
PERMISSIBLE VELOCITIES FOR CHANNELS**

Maximum Permissible Velocities in Bare Earth Channels -For Straight Channels where slope < .02 ft/ft

| Soil Materials | n* | Clear Water | Water Transporting |
|--|------|-------------|-------------------------|
| | | (V fps) | Colloidal Silts (V fps) |
| Fine sand, noncolloidal | .020 | 1.50 | 2.50 |
| Sandy loam, noncolloidal | .020 | 1.75 | 2.50 |
| Silt loam, noncolloidal | .020 | 2.00 | 3.00 |
| Alluvial silts, noncolloidal | .020 | 2.00 | 3.50 |
| Ordinary firm loam | .020 | 2.50 | 3.50 |
| Stiff clay, very colloidal | .025 | 3.75 | 5.00 |
| Alluvial silts, colloidal | .025 | 3.75 | 5.00 |
| Shales and hardpan | .025 | 6.00 | 6.00 |
| Fine Gravel | .020 | 2.50 | 5.00 |
| Graded loam - cobbles (when noncolloidal) | .030 | 3.75 | 5.00 |
| Graded silt - cobbles (when noncolloidal) | .030 | 4.00 | 5.50 |
| Coarse gravel noncolloidal | .025 | 4.00 | 6.00 |
| Cobbles and shingles | .035 | 5.00 | 5.50 |

* Listed n values assume good to excellent construction techniques which produce uniform channel dimensions. Values should be adjusted, by use of SCS Engineering Handbook #5, Supplement B, for other construction conditions.

TABLE A-5.2 Maximum Permissible Velocities for Channels Lines with Vegetation

| Cover | Slope Range Percent | Permissible Velocity ft/sec. | |
|---------------------------------|---------------------------|--|------------------------------------|
| | | Erosion ¹ Resistant Soil | Easily ¹ Eroded Soil |
| Kentucky Bluegrass | < 5 | 7 ³ | 5 |
| Tall Fescue | 5-10 | 6 ³ | 4 |
| | > 10 | 5 | 3 |
| Grass Mixture | < 5 | 5 | 4 |
| Reed Canarygrass | 5-10 | 4 | 3 |
| Sericea Lespedeza | < 5 | 3.5 | 2.5 |
| Weeping Lovegrass | | | |
| Redtop | | | |
| Red Fescue | | | |
| Annuals temporary cover only | < 5 | 3.5 | 2.5 |
| Sudangrass | | | |

¹ Cohesive (clayey) fine grain soils and coarse grain soils with a plasticity index of 10 to 40 (CL, CH, SC, & GC).

² Soils that do not meet the requirements for erosion resistant soils.

³ Use velocities exceeding 5 ft./sec. only where good cover and proper maintenance can be obtained.

TABLE A-8
SOILS IDENTIFIED IN THE CENTRE COUNTY SOIL SURVEY
AS ON FLOOD PLAINS OR ON TERRACES ABOVE FLOOD PLAINS

| | |
|--------------------|---|
| Allegheny Series | Allegheny silt loam (AIB) |

Well Field 5

Municipality: Ferguson Township
Well Owner: State College Water Authority
Includes wells: F55, F57
Protection Area: One-year zone of contribution
Source: Nittany Geoscience, February 1992, Figure 4

Well Field 6

Municipality: Benner and Patton Townships
Well Owner: State College Water Authority
Includes wells: B62, B63, B64, B65
Protection Area: One-year zone of contribution + direct upslope lands
Source: Nittany Geoscience, February 1992, Figure 4

PSU Golf Course Well Field

Municipality: Ferguson Township and the Borough of State College
Well Owner: Penn State University
Includes wells: PS28A, PS 37
Protection Area: One-year zone of contribution
Source: Nittany Geoscience, January, Figure 5

PSU Big Hollow Well Field

Municipality: Patton, Ferguson, and College Townships
Well Owner: Penn State University
Includes wells: PS2, PS14, PS16, PS17, PS24, PS26
Protection Area: One-year zone of contribution
Source: Nittany Geoscience, January, Figure 5

PSU Houserville Well Field

Municipality: Ferguson Township
Well Owner: Penn State University
Includes wells: PS33, PS 34, PS35
Protection Area: One-year zone of contribution
Source: Nittany Geoscience, January, Figure 5

Existing Well and Spring

Municipality: Ferguson Township
Well Owner: State College Water Authority
Includes wells: F3
Protection Area: 400' Radius + direct upslope lands

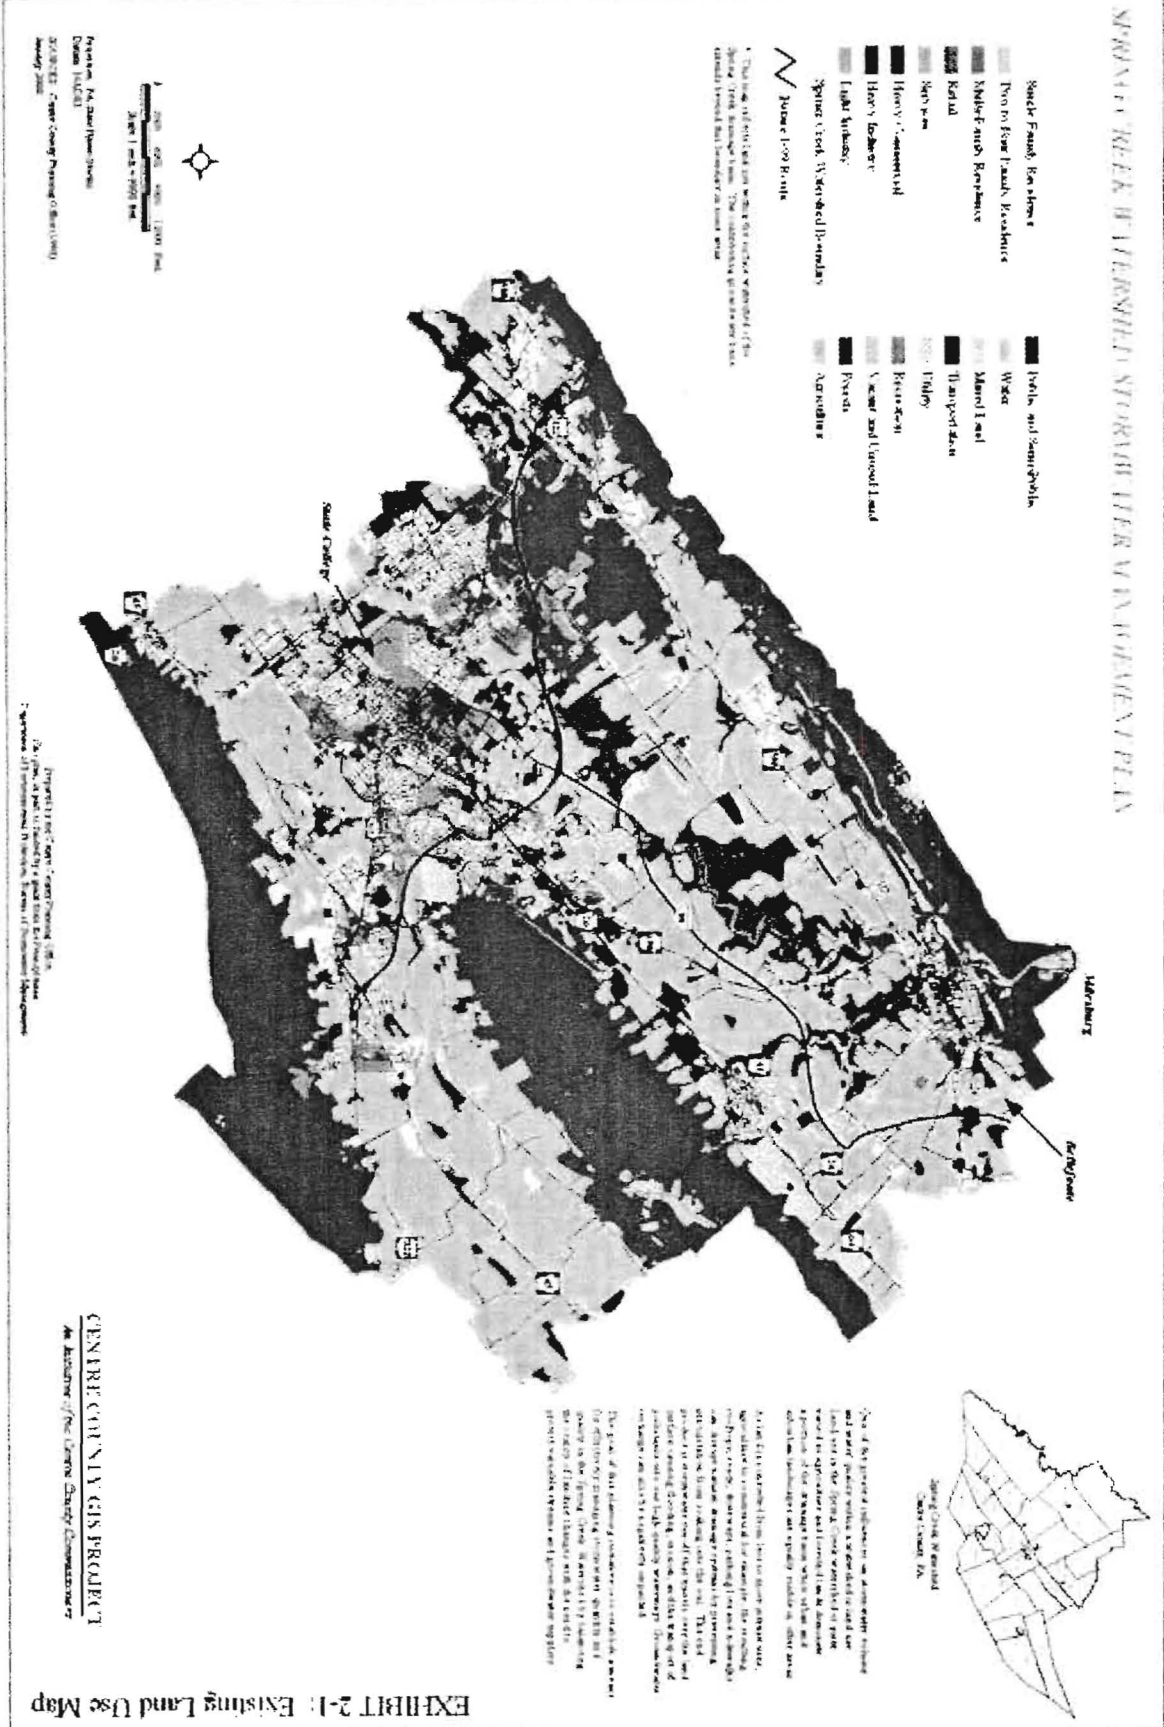

Ridgemont Wells

Municipality: Patton Township
Well Owner: Ridgemont Water Authority
Includes wells: P1, P2
Protection Area: 400' Radius

Spring Creek Park, Lemont #4, Lemont #5, and Rogers Wells, and Bathgate Springs

Municipality: College Township
Well Owner: College Township Water Authority
Includes wells: C1, C2, C3, C4, C5
Protection Area: 400' Radius

Property is not owned by the City of Spring Creek, Texas. The City of Spring Creek, Texas is not responsible for any errors or omissions on this map. The City of Spring Creek, Texas is not responsible for any damages or losses resulting from the use of this map.

The goal of this planning study is to provide a comprehensive analysis of the existing land use patterns in Spring Creek, Texas, and to identify areas that are suitable for future development. The study will also identify areas that are not suitable for future development and provide recommendations for future land use planning.

APPENDIX C

LIST OF VARIATIONS WITH MODEL ORDINANCE

1. In paragraph A of Section 110 Exemptions, changed the maximum impervious area from 20,000 sq. ft. to 5,000 sq. ft.
2. In paragraph A.1.a of Section 304 Calculation Methodologies, deleted "The Township Engineer shall use a 5% increase as a general benchmark for defining "negligible".
3. In paragraph A.4 of Section 304 Calculations Methodologies, deleted the following subparagraph, "For sites less than one (1) acre in total area that connect directly to existing storm sewer systems, surface or subsurface (underground) stormwater detention facilities only need to be designed to control storm events up to the design return period of the existing pipes (usually 10 years). However, it must be demonstrated that adequate conveyance capacity (overland or within the existing storm sewer system) exists to ensure that flooding or damage from proposed releases will not exceed the existing potential for the system. If warranted by historic flooding in the tributary storm sewer system, the Township may require more stringent criteria."
4. In paragraph B.6.b of Section 307. Design Criteria for Stormwater Management Facilities, change the minimum slope of the interior of the pond from 2:1 to 3:1.
5. In paragraph C of Section 404 Drainage Plan Review, added 60 day review period and added "or Developer's agent who submitted Plan" as entity to be notified of Plan approval.
6. In paragraph D of Section 404 Drainage Plan Review, added "or Developers agent who submitted Plan" as entity to be notified of Plan disapproval.
7. In paragraph J of Section 404 Drainage Plan Review, added the time period of 3 years in which the improvements must be completed.
8. In Section 805 Penalties, added \$100.00.
